

## Soudaseal SWI

Revision: 28/11/2019

Page 1 from 2

### Technical data

Basis	MS Polymer
Consistency	Stable paste
Curing system	Moisture curing
Skin formation* (23°C/50% R.H.)	Ca. 5 min
Curing speed * (23°C/50% R.H.)	3 mm/24h
Hardness**	50 ± 5 Shore A
Density	1,47 g/ml
Elastic recovery (ISO 7389)**	> 75 %
Maximum allowed distortion	± 20 %
Max. tension (ISO 37)**	3,00 N/mm <sup>2</sup>
Elasticity modulus 100% (ISO 37)**	1,60 N/mm <sup>2</sup>
Elongation at break (ISO 37)**	500 %
Consumption (*)	Approx. 7 m per foilbag of 600 ml (single bead with triangle nozzle)
Initial tack	Minimum 125 kg/m <sup>2</sup>
Temperature resistance**	-40 °C → 90 °C
Application temperature	5 °C → 35 °C

\* These values may vary depending on environmental factors such as temperature, moisture, and type of substrates. \*\* This information relates to fully cured product.

### Product description

Soudaseal SWI is a high quality, neutral, elastic, 1-component adhesive sealant based on MS-Polymer with a very high initial tack. Soudaseal SWI has been specially developed for bonding as well as for air and driving rain tight sealing of the SoudaFrame SWI in of front wall system.

### Properties

- Characteristic load-bearing capacity of the adhesive bond (wind load): FRK = 4.71 kN
- High initial tack
- Excellent adhesion to SoudaFrame SWI frame elements
- Fast curing
- Good extrudability
- high shear strength after full cure (no primer)
- Good weather and UV resistance.
- Stays elastic after curing and very durable
- No odour.
- Can be painted with water based systems
- Does not contain isocyanates and no silicones

- Good adhesion on slightly moist substrates

### Applications

- Bonding and installing as well as air- and driving rain tight sealing of SoudaFrame SWI onto most common building substrates.
- Sealing of the corners of SoudaFrame SWI on the inside of the assembled subframe (before installation of the window).

### Packaging

*Colour:* grey

*Packaging:* 600 ml foil bag

### Shelf life

12 months in unopened packaging in a cool and dry storage place at temperatures between +5°C and +25°C.

### Chemical resistance

Good resistance to (salt)water, aliphatic solvents, hydrocarbons, ketones, esters, alcohols, diluted mineral acids and alkalis. Poor resistance to aromatic solvents,

Remark: This technical data sheet replaces all previous versions. The directives contained in this documentation are the result of our experiments and of our experience and have been submitted in good faith. Because of the diversity of the materials and substrates and the great number of possible applications which are out of our control, we cannot accept any responsibility for the results obtained. Since the design, the quality of the substrate and processing conditions are beyond our control, no liability under this publication is accepted. In every case it is recommended to carry out preliminary experiments. Soudal reserves the right to modify products without prior notice.

concentrated acids and chlorinated hydrocarbons.

### Substrates

*Substrates:* Various porous and non-porous surfaces such as wood, concrete, stone and other materials commonly used in construction.

*Nature:* rigid, clean, dry or slightly moist, free of dust and grease.

*Surface preparation:* The load-bearing wall requires no pretreatment. Porous surfaces in water loaded applications should be primed with Primer 150. A preliminary adhesion test on every surface is recommended. SoudaFrame SWI should preferably first be cleaned with Soudal Surface Cleaner. Not suitable for PE, PP, PTFE (eg Teflon®), bituminous substrates, copper or copper-containing materials such as bronze and brass.

### Joint dimensions

The optimal bond thickness for this product is at least 2 mm for the elastic properties to come to full justice.

### Application method

*Application method:* With a manual, pneumatic or accu caulking gun. Apply, 2 uninterrupted beads of Soudaseal SWI approx. 1 cm from each edge with a triangular nozzle. Do this over the entire circumference of the SoudaFrame SWI support frame. Apply an extra bead over the connection seams of the corners and where the frame has been extended.

*Cleaning:* Clean with White Spirit or Soudal Surface Cleaner immediately after use (before curing).

*Finishing:* With a soapy solution or Soudal Finishing Solution before skinning.

*Repair:* With the same material.

### Health- and Safety Recommendations

Take the usual labour hygiene into account. Consult label and material safety data sheet for more information.

### Remarks

- Soudaseal SWI may be overpainted with water based paints, however due to the large number of paints and varnishes available we strongly suggest a compatibility test before application.
- The drying time of alkyd resin based paints may increase.
- When using different reactive joint sealants, the first joint sealant must be completely hardened before the next one is applied.
- Do not use in applications where continuous water immersion is possible.
- Discoloration due to chemicals, high temperatures, UV-radiation may occur. A change in color does not affect the technical properties of the product.
- Contact with bitumen, tar or other plasticizer releasing materials such as EPDM, neoprene, butyl, etc. is to be avoided since it can give rise to discoloration and loss of adhesion.

### Environmental clauses

#### *Leed regulation:*

Soudaseal SWI conforms to the requirements of LEED. Low –Emitting Materials: Adhesives and Sealants. SCAQMD rule 1168. Complies with USGBC LEED 2009 Credit 4.1: Low-Emitting Materials – Adhesives & Sealants concerning the VOC-content.

### Liability

The content of this technical data sheet is the result of tests, monitoring and experience. It is general in nature and does not constitute any liability. It is the responsibility of the user to determine by his own tests whether the product is suitable for the application.
